

7-1 User's Guide & Installation Manual

1. Connect device to your Mac via cable
2. Click the simulator selection dropdown in the top left of Xcode. It might say Generic iOS Device
3. At the bottom of that dropdown menu, you should see a button that says Add additional simulators...
4. At the top of the window that comes up after you click Add additional simulators.. there should be a Devices tab. Select that tab and add your device via the + icon in the bottom left of the window
5. Once connected and paired, you can travel back to the simulator dropdown menu and scroll up. Your device should be listed there if it's plugged in and paired. Select the device and run your app - Xcode will take care of installation.
